

- Touch screen operation with easy inputs.
- Operates in cutting mode to cut material to correct size or box mode to create corrugated packaging based on your dimensions.
- Operates in 1/16, decimal and metric scales.
- Small footprint means you can operate within very limited space constraints.
- Needs only 110 Volt power and a small air compressor to operate.
- Built in the USA by people who use the same machines every day.

We've spent the last 10 plus years using other manufacturer's box making equipment that we have purchased. Although we've done well, we have never bought a two-pass machine that had all the features we wanted at an affordable cost. By incorporating the slitting or sheet cutting capability directly into the Santiam Box Machine, we have eliminated the need for a traditional slitter, saw or other cutting device. This saves you valuable floor space, time and the additional cost and maintenance of a separate cutting machine.

Power 110 Volt Single Phase 60 Hz 20 Amp
 Air 95 psi @ 6 cfm
 Dimensions 92" L x 64" W x 59" H
 Weight 1,400 Lbs.
 Warranty 1 Year

UPS, FEDEX and USPS shipping rates are all going up dramatically. By making correct-sized packaging to fit your exact needs, the savings on shipping costs can add up to a considerable amount. The ability to create the correct cost-effective packaging in the right quantities when needed eliminates the frustration of dealing with outside vendors that may have a long lead time or force you into purchasing more packaging than needed in sizes that are "close", but not exactly what is needed.

Whether you purchase a Santiam Box Machine for internal use, or to become a supplier of short-run packaging for other customers, we believe this is a machine that will exceed your expectations.
